Small, 2022, 18 2204116

C₂N Materials for Reduction of Nitrogen

C₂N Materials for Reduction of Nitrogen

Scenarios for catalyst activation:

- No major reaction of the nitrile groups or structural changes of the C₂N matrix
- Shift of electron density from the nitrile groups to the active site
- Changes in the electrochemical double layer

Photo-Electrocatalysis by Acetylenic Polymers

Cooperation with X. Feng, TU Dresden

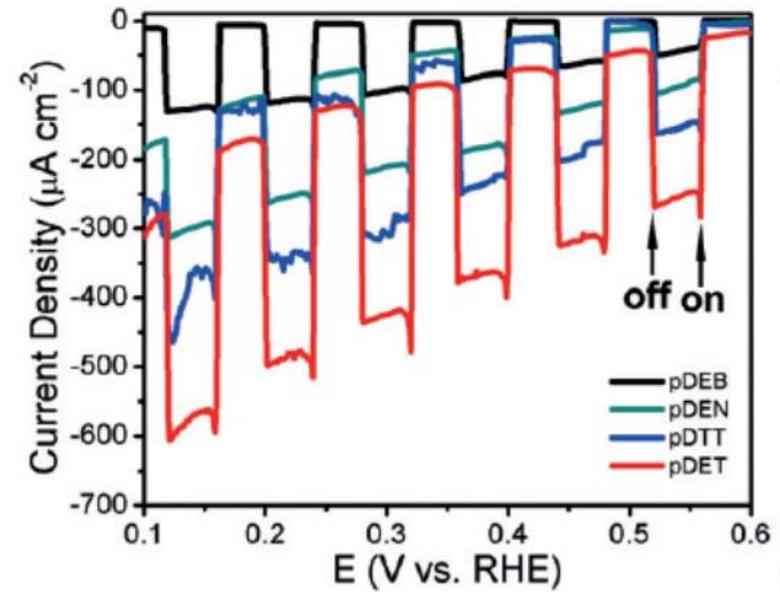

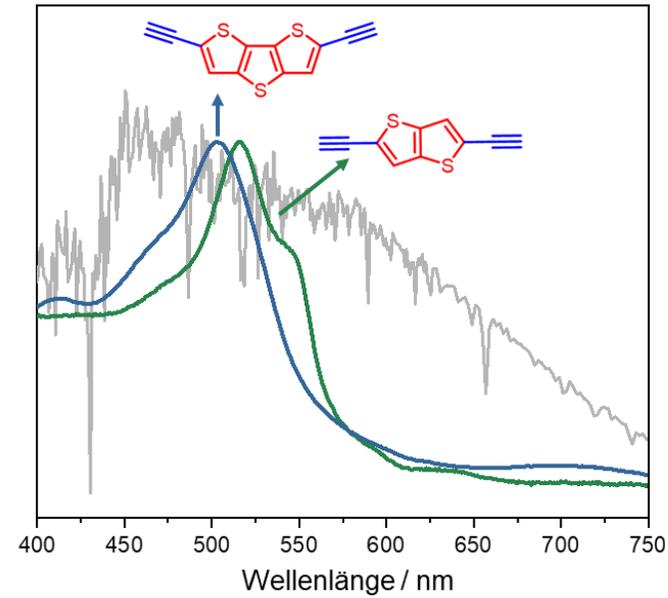

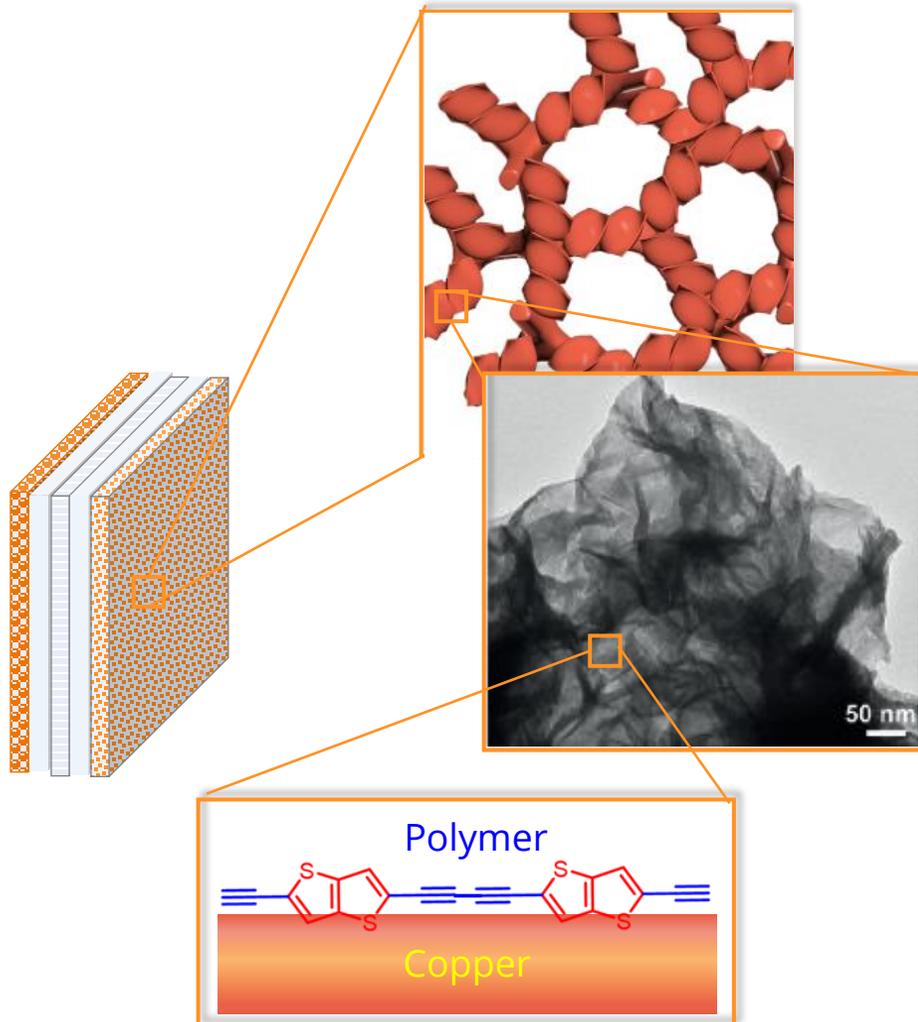

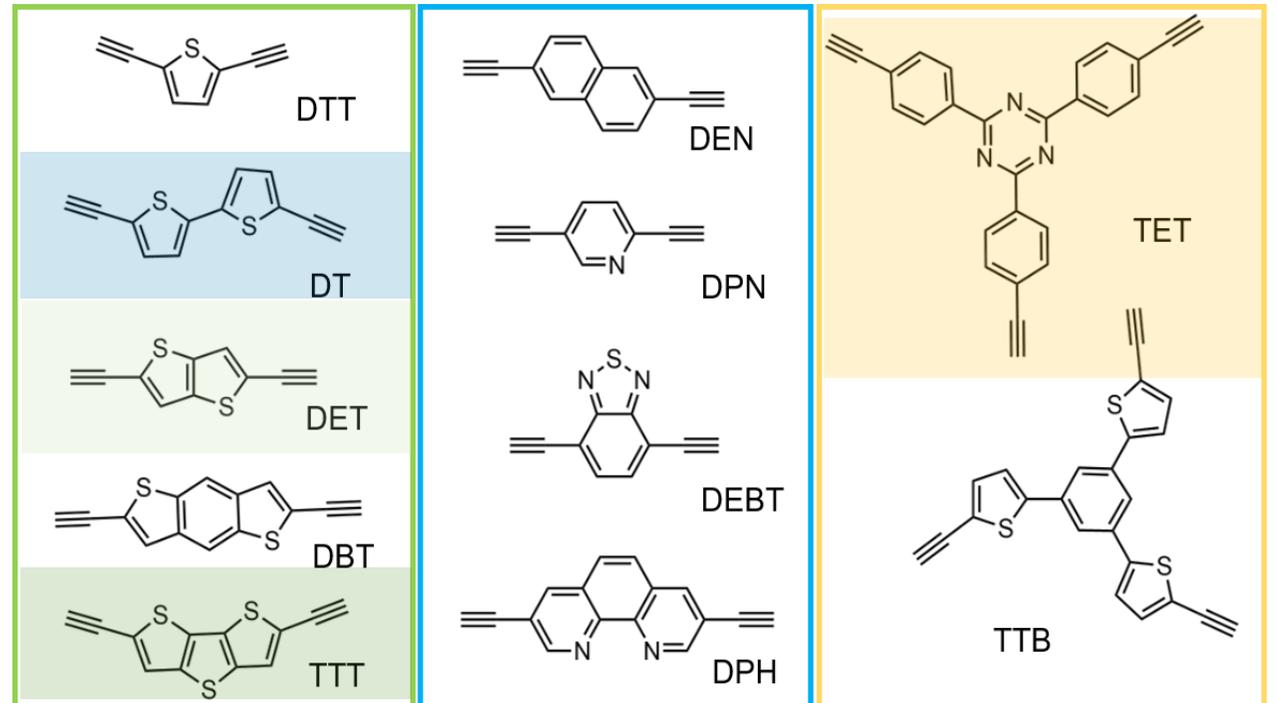

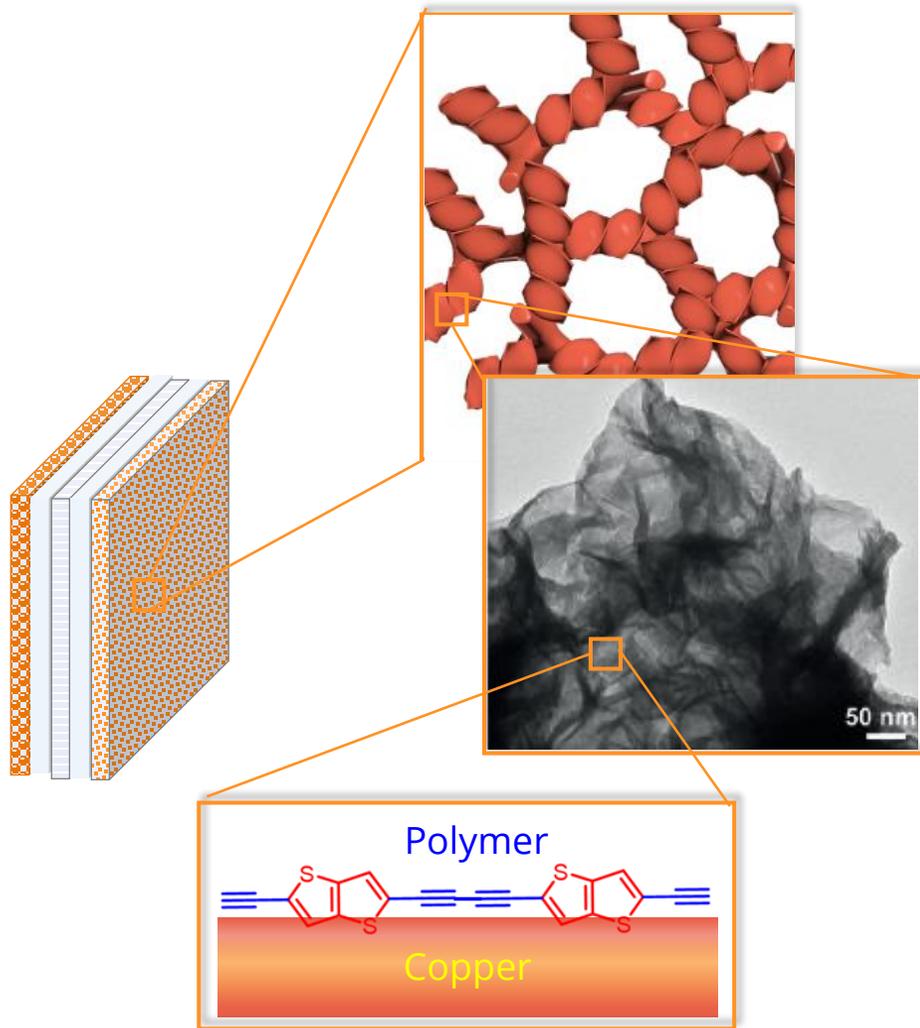

Photo-Electrocatalysis by Acetylenic Polymers

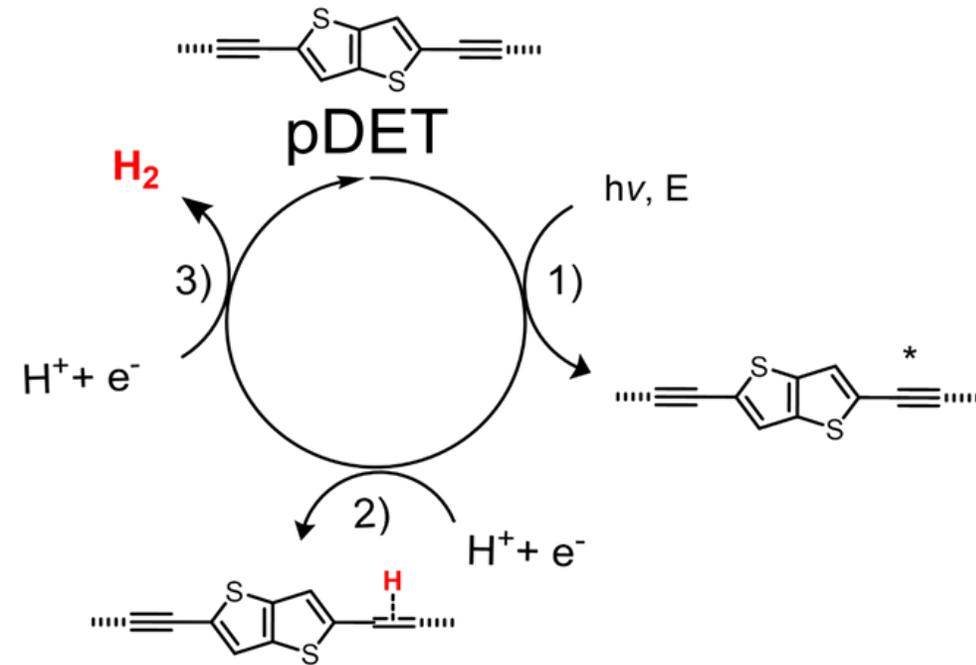

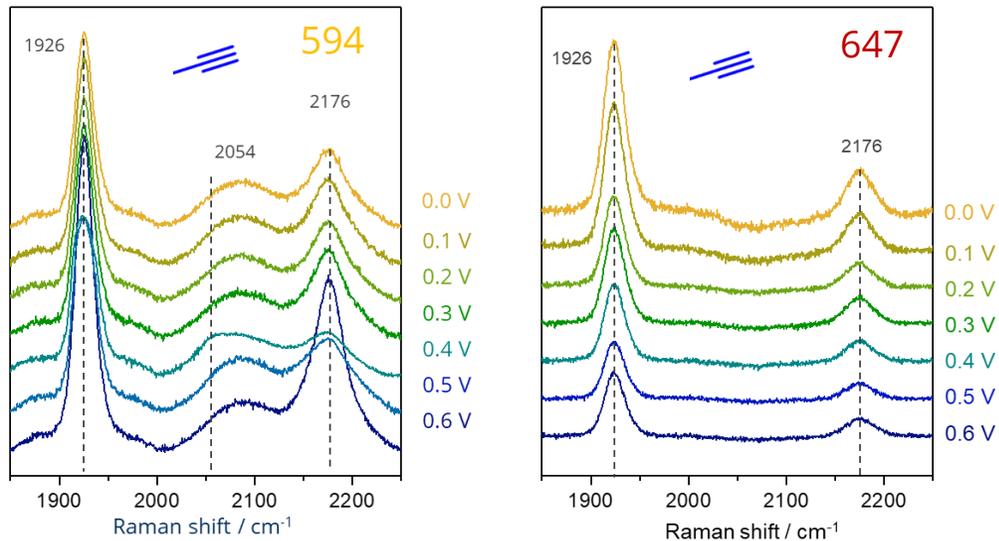

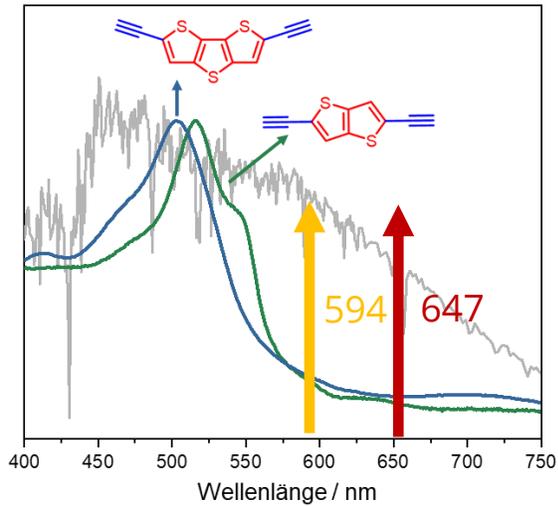

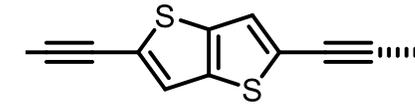

Best HER in neutral conditions

Best HER in alkaline conditions

Bifunctional HER and OER catalyst

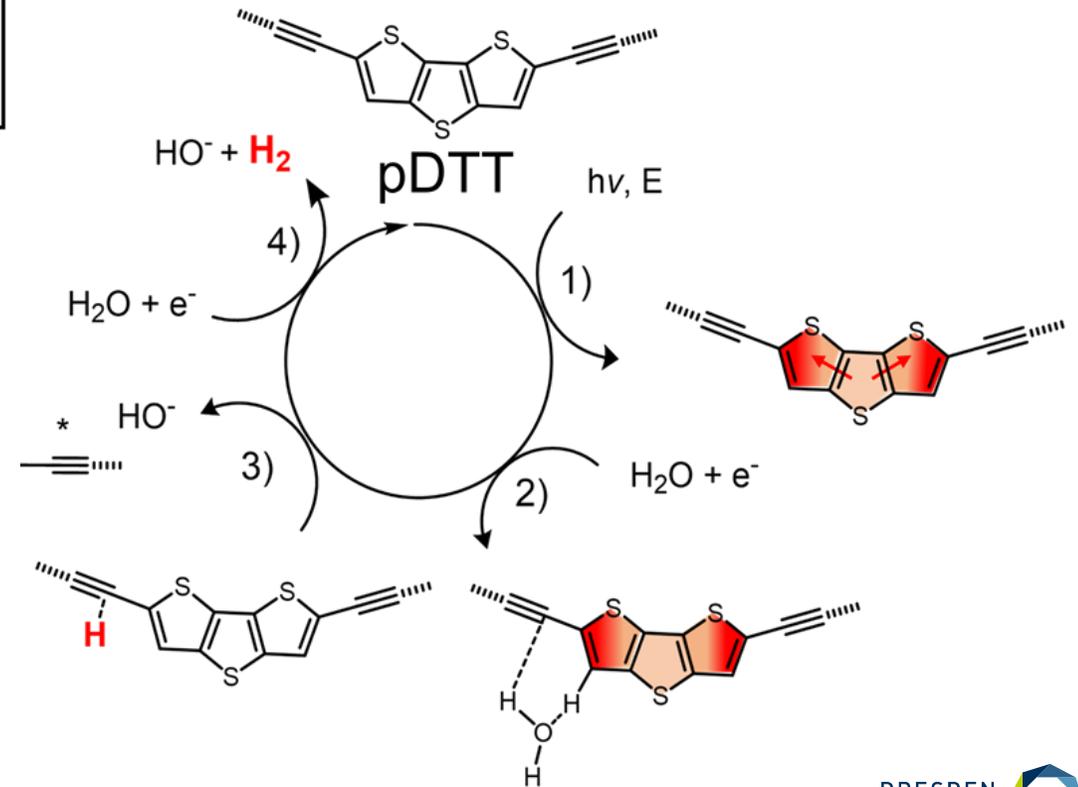

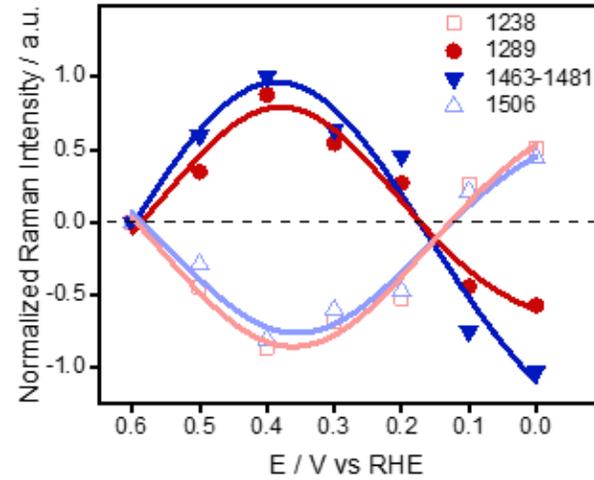

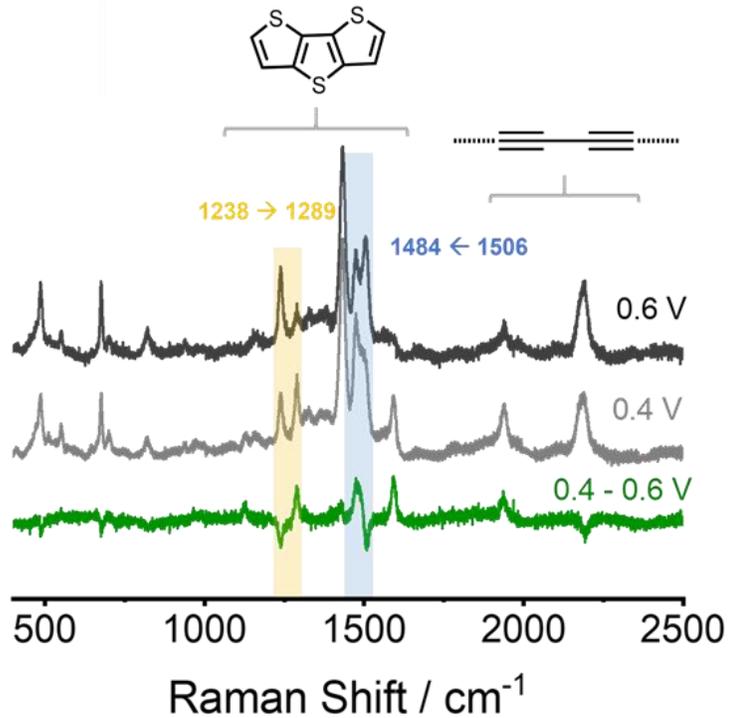

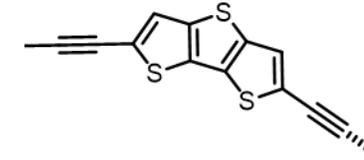

Only CAP that performs NRR

Photo-Electrocatalysis by Acetylenic Polymers

Angew. Chem. Int. Ed. **2019**, *58*, 10368

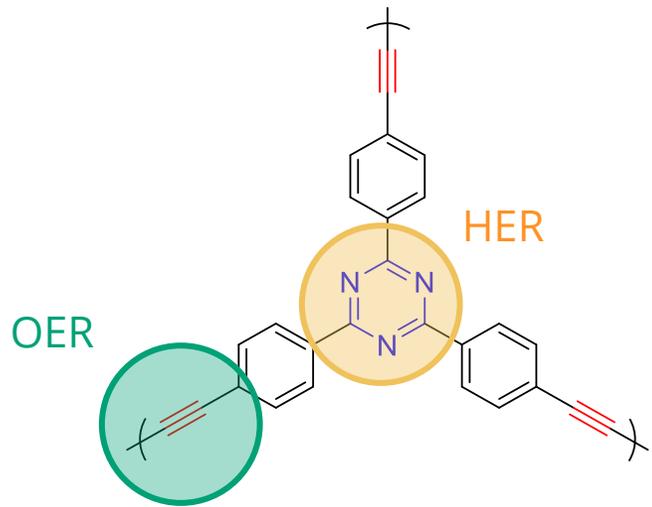

Photo-Electrocatalysis by Acetylenic Polymers

Angew. Chem. Int. Ed. **2021**, 60, 18876

Mino Borrelli PhD

Photo-Electrocatalysis by Acetylenic Polymers

Inversion Potential

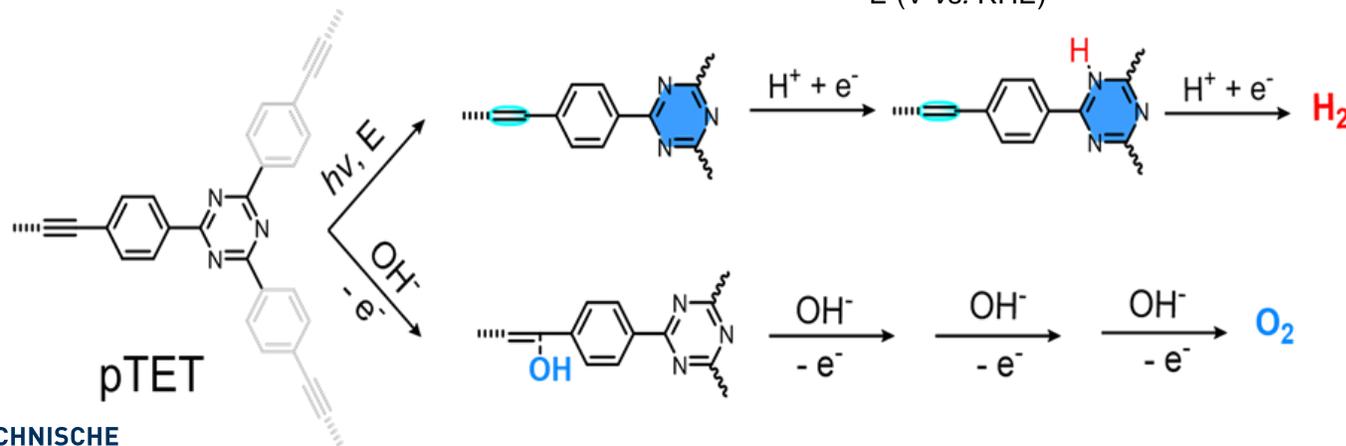

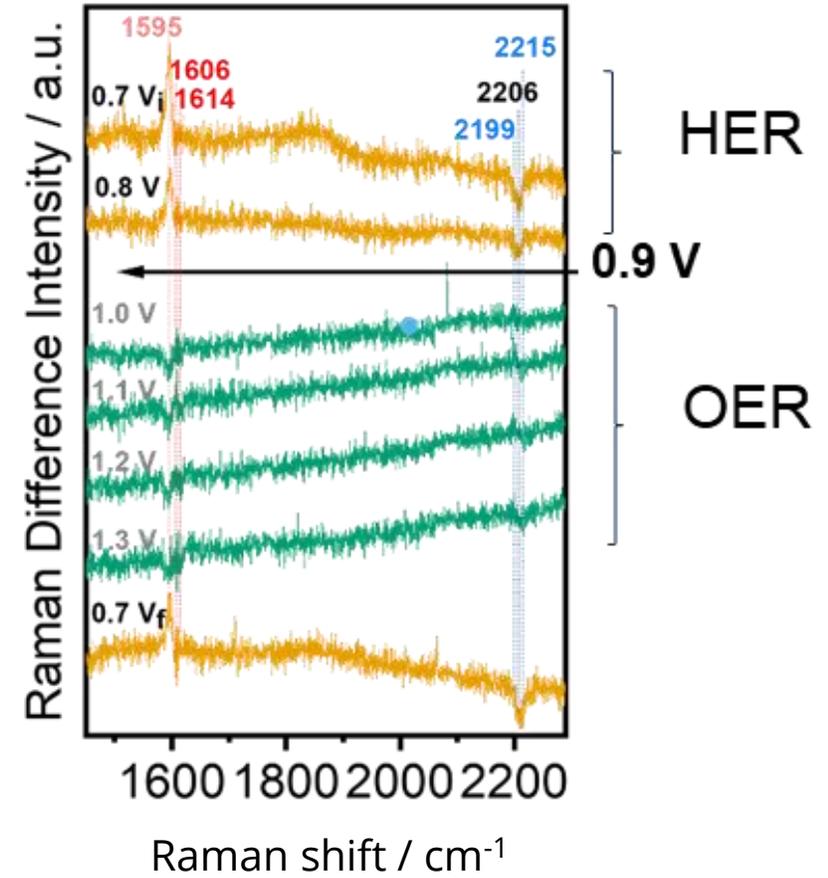

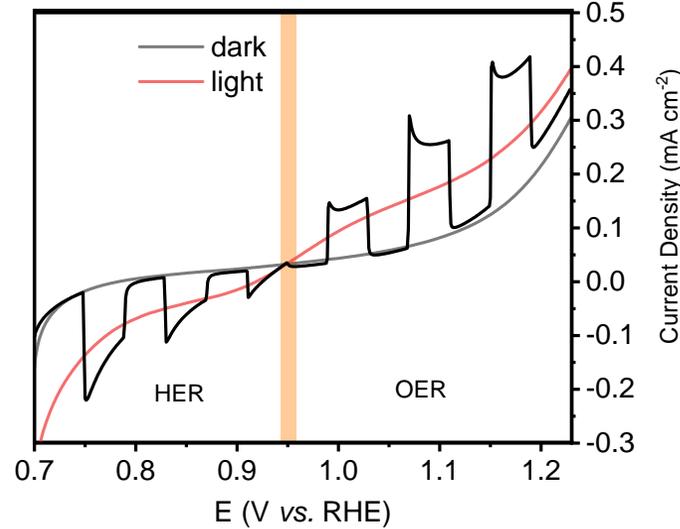

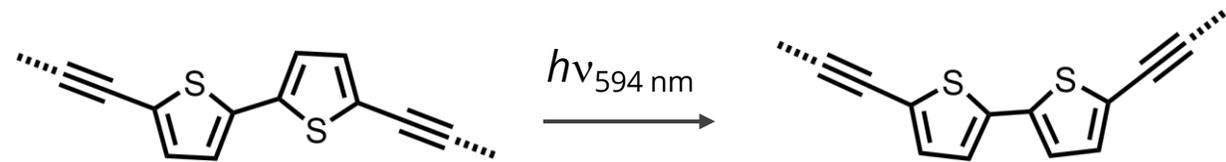

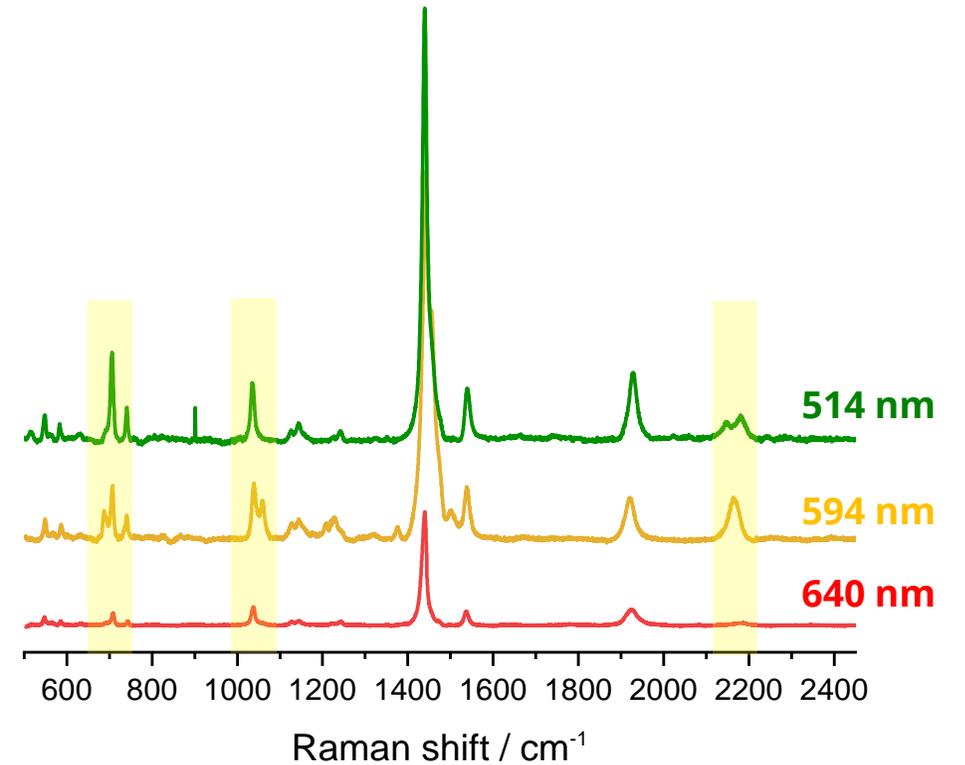

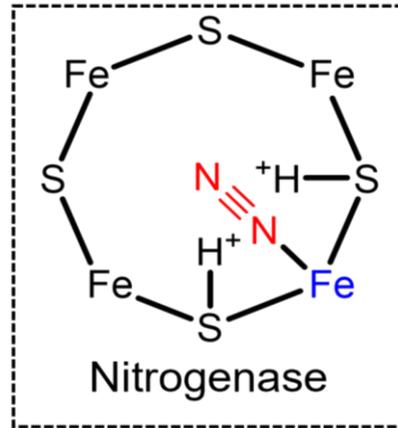

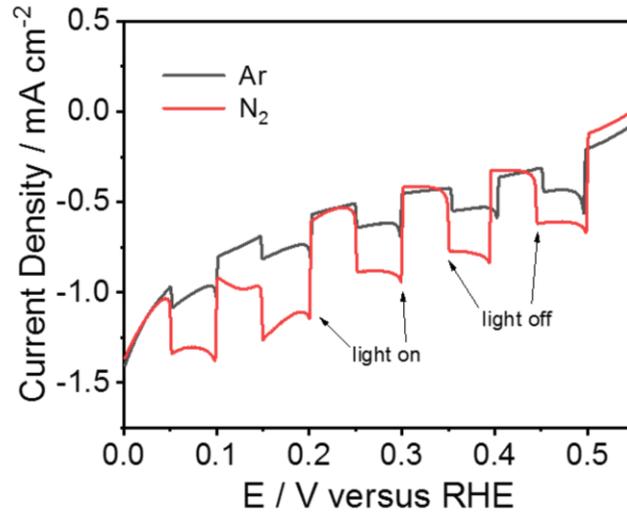

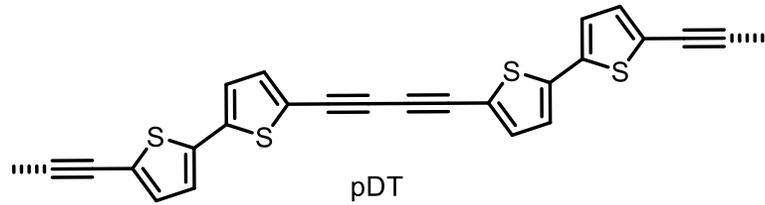

Photo-Electrocatalysis by Acetylenic Polymers
